

Non-Animal Origin, BSE, TSE

TBF asserts that, to the best of our knowledge, our products and originating plant materials do not intentionally include any substances of animal origin or their derivatives during the manufacturing process. Therefore the products bear no risk of containing any potential presence of Bovine Spongiform Encephalopathy (BSE) or Transmissible Spongiform Encephalopathy (TSE). However, at the biomass stage for some raw input materials there is a potential for the utilization of animal manure.

This statement is provided without the intention of preempting or superseding any regulatory requirements concerning the utilization and incorporation of TBF products into downstream finished products. We maintain our unwavering commitment to upholding safety standards and ensuring compliance with relevant regulations.
