
Longevity of product

Terpene Belt Inc. asserts that a shelf life for our product has not been established.

As stated on our Specification Sheet for each product, it is advised to store the essential oil in cold conditions and in the dark.

When the product arrives to you it has been flushed with Argon or Nitrogen. After opening, if you intend to store the remaining product for later use, we recommend that you do the same.

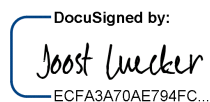

If our oil is stored under proper storage conditions for more than two years from the born on date (BoD) shown on the label, which is when samples were taken for third party COA testing, we recommend that you retest the oil to fall within the defined specification on the product Spec Sheet.

It is expected that minor compositional changes or possible degradation can occur in the oil over time, as the essential oil is a complex mixture of substances.

As per our product Specification Sheets, Terpene Belt asserts that the Batch to Batch variation that might be seen on the COAs for the main 5 terpenes in each product will be within the $\pm 15\%$ range specified.

This statement is provided without the intention of preempting or superseding any regulatory requirements concerning the utilization and incorporation of Terpene Belt products into downstream finished products. We maintain our unwavering commitment to upholding safety standards and ensuring compliance with relevant regulations.
